## Project Concept

1

### Player Control

You control a

cylinder

in this

hack n' slash 3D platform survival game

where

L Click/WASD/Space

makes the player

move around, perform jumps and throw projectile axes

2

### Basic Gameplay

During the game,

random enemies

appear

from

every direction

and the goal of the game is to

slay the amount of enemies each level of difficulty demands.

3

### Sound & Effects

There will be sound effects

- regarding losing the game,
- slaying an enemy,
- making a jump
- throwing an axe

and particle effects

- from an enemy's death

[optional] There will also be

coins to gather.

4

### Gameplay Mechanics

As the game progresses,

the enemies spawning ratio is progressively increasing

making it

more competitive and fun

[optional] There will also be

different levels of difficulty

5

### User Interface

The

Game Over sign

will

appear

whenever

our character dies

At the start of the game, the title

"chose your game mode"

will appear

and the game will end when

our character kills as many enemies and obtains as many coins as demanded

6

### Other Features

There will also be background music and a slider that allows the player to configure the volume. There also going to be kill and coin count on screen, as well as a restart option on every game over.

# Project Timeline

| Milestone | Description                                                                                                                                  | Due      |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------|----------|
| #1        | creating some scene, character and enemy designs                                                                                             | 13/10    |
| #2        | importing the appropriate package                                                                                                            | 13/10    |
| #3        | getting along with the code regarding the player (attacks, combos and jumps)                                                                 | 14/10    |
| #4        | adding extra mechanics and features                                                                                                          | 14/10    |
| #5        | final test and some maybe some extra features                                                                                                | 15-17/10 |
| Backlog   | If there is enough time, I would like to create some assets of my own on Blender and maybe add some more features and mechaincs on the game. | 15-17/10 |
